Case Study Summary

Multi-Modal Learning Program for Medicare Appeals Workforce Readiness

EXECUTIVE SUMMARY

Designed and developed a comprehensive, multi-modal learning program to support workforce readiness for Centene's Medicare Appeals operations. The solution combined instructor-led learning, asynchronous training, instructional videos, webinars, learning games, case-based learning, and interactive learning resources to accommodate diverse learning preferences while reinforcing critical business processes.

By integrating realistic patient scenarios, proprietary workflow frameworks, and learner commitment tools, the program provided employees with multiple opportunities to build knowledge, practice decision-making, and apply new skills within a regulated healthcare environment.

SEER FRAMEWORK

3 minute video snapshot. Throughout my career, I've combined visionary thinking with practical execution to help organizations prepare for the future. By anticipating workforce needs, leveraging emerging technologies, and designing scalable learning ecosystems, I align workforce development with business strategy.

This philosophy inspired me to create the **SEER Framework**—a business-focused methodology built on **Strategy, Execution, Enablement, and Results**. SEER transforms business objectives into workforce capability, equips employees with the knowledge and support to succeed, and measures business impact.

SEER PHASE	DETAILS	SAMPLE or THUMBNAIL
STRATEGIC	Decide plans by defining the future. The learning strategy focused on building a workforce capable of processing Medicare Appeals accurately through engaging, learner-centered experiences that supported multiple learning styles. Rather than relying on a single instructional method, the strategy emphasized a blended learning ecosystem designed to improve engagement, reinforce workflow consistency, and support workforce capability in a regulated healthcare environment. Strategic Activities • Blended learning strategy • Competency development strategy • Learner engagement strategy • Learning strategy • Performance improvement strategy • Workforce development strategy	
EXECUTION	Design workforce using tactics. (Knowledge, Skills, Attitude, Behavior) Designed learning experiences that defined the knowledge, skills, and behaviors required for successful Medicare Appeals processing. Execution Activities • Competency development • Instructional design • Knowledge architecture • Learning architecture • Problem-solving framework design • Scenario-based learning design • Workflow framework development	

SEER PHASE	DETAILS	SAMPLE or THUMBNAIL
	Capability Framework Components Knowledge • Business processes • Medicare Appeals workflow • Patient case interpretation Skills • Appeals processing • Decision making • Problem solving • Workflow execution Behaviors • Accountability • Accuracy • Consistency • Learner reflection	
ENABLEMENT	Develop resources to prepare people for success. (Deliverables, resources and tools) Developed a comprehensive collection of learning resources that supported employees before, during, and after formal training while accommodating different learning preferences. Deliverables • Animation • Asynchronous learning modules • Audio learning resources • Case scenarios using redacted patient records • Commitment statement • Instructional videos • Learning games • Learning Journal • Live webinars • PATH workflow framework • STARS workflow framework • Written learning materials	
RESULTS	Evaluate data to measure business impact. The project established a blended learning ecosystem that provided multiple pathways for learning and practice while reinforcing standardized business processes. By combining instructor-led learning with self-paced resources, realistic case scenarios, multimedia content, and proprietary workflow frameworks, the program strengthened workforce readiness and created a consistent learning experience that supported employees throughout the learning journey.
